DESCRIPTION

The acid condensate water neutraliser is an ecological and practical solution to the problem of condensate disposal in condensation boilers.

In fact, it allows the installation of a boiler even in the absence of a suitable exhaust system.

The boilers produce condensation with acidic pH, which must be discharged and disposed of carefully so that it does not cause damage to the pipes of the home system and to the environment.

The acid condensate water neutraliser is a simple device to be installed on the condensate output of the boiler which is thus neutralised and eliminated without damage to the drains.

The neutraliser is used in apartments or small commercial premises.

The acid condensate water neutraliser is installed only once; then it is only necessary to replace the neutralising substance annually.

TECHNICAL SPECIFICATIONS:

- Effectively neutralises acid condensation
- Helps protect the environment
- Innovative, lightweight design
- Replaceable neutralising substance
- Granules with antibacterial and anti-algae
- Quick and easy assembly
- Includes fastening clamps
- Easy cleaning and maintenance
- Does not interfere with operation of boiler
- Plexiglass envelope

ITEMS

CODE	DESCRIPTION	LENGTH [mm]	SALT CONTENT [kg]	Ø [mm]
27200121		210	130 [gr]	32
